Acknowledgement

It is difficult to find words to express my feelings of gratitude to **Ms. Anjali Jain** for her keen interest and guidance during the completion of this project work, without which this might have not been possible.

Respectfully, I want to give a sincere thanks to **Dr. R.C. Lodha (Principal)** for providing us all the facilities and resources needed to develop this software and encourage us from time to time.

I am very much in debited to our inspiring **H.O.D. Mr. Naveen Dewra** who had always been a source of inspiration to me during the course of this project work.

Rukhsana

Certificate

This is to certify that **Rukhsana, student at Bachelor in Computer Applications** of “**Shri Vardhman P.G. Girls College, Beawar**” affiliated to **Maharishi Dayanand Saraswati University, Ajmer** has done project work entitled **EcoTrek** in Website Developoment under my guidance and supervision. The matter embodied in this project is a genuine work done by the student and has not been submitted earlier for award of any degree or diploma to the best of my knowledge and belief.

Signature of Student (s)

Signature of Guide

1. _____

Appraisal Sheet

This is to certify that **Rukhsana, student at Bachelor in Computer Applications** of “**Shri Vardhman P.G. Girls College, Beawar**“ affiliated to **Maharishi Dayanand Saraswati University, Ajmer** has done project work with dedication and determination entitled **EcoTrek**.

This project work challenges students to think beyond the boundaries of classroom, helping them in developing their skills, behaviour and confidence. Designing learning environment that help student's questions analyze, evaluate and extrapolate their plans.

This project work helps in revealing their higher technical skills, aptitude and productivity and this project is the result of their hard work and full dedication towards successful completion of the project.

**Mr. Naveen Dewra
(HOD)**

**Dr. R. C. Lodha
(Principal)**

Internal Examiner

External Examiner

Objective

1. Help Businesses Accurately Measure Their Carbon Footprint

The website aims to provide companies with a simple yet effective tool to estimate their carbon emissions based on their activities. The calculator dynamically updates the total emissions, required carbon credits, and cost as users input their data. This ensures that businesses have a clear understanding of their environmental impact.

2. Make Carbon Credit Purchases Easy and Transparent

One of the key goals of the website is to allow businesses to offset their carbon footprint by purchasing carbon credits. To maintain transparency, users must first select a verified carbon offset project before making a purchase. This ensures that every credit bought is linked to a real environmental initiative.

3. Provide Clear Information on Carbon Offset Projects

The platform showcases various carbon offset projects, giving users the ability to choose one that aligns with their values. Each project comes with detailed descriptions, impact reports, and a ‘Learn More’ button for additional insights. Interactive elements, such as hover animations, make the experience engaging while keeping the information accessible.

4. Ensure a User-Friendly and Interactive Experience

The website is designed to be visually appealing and easy to navigate. The carbon footprint calculator updates results in real-time, and

project cards feature smooth animations to enhance user engagement.

These elements work together to create a seamless experience, making carbon offsetting more approachable for businesses.

5. Generate and Store Certificates for Proof of Offset

To provide credibility and encourage businesses to take action, the platform automatically generates a certificate once a company completes its purchase. These certificates serve as proof of their contribution to reducing carbon emissions. The system also stores these certificates in a database for future reference.

6. Ensure Security, Accuracy, and Reliability

The website is built using **pure HTML, CSS, JavaScript, and PHP**, ensuring a secure and efficient system. It prevents users from skipping essential steps, such as selecting a project before purchasing credits. Data handling is done carefully to maintain accuracy, reliability, and trustworthiness.

Hardware & Software Requirement

Languages Used : -

- a.) PHP , HTML , CSS, JAVASCRIPT as front end.
- b.) MySQL as back end.
- c.) Php mailer as for sending mails.
- d.) Fpdf for generating certificate.

Software Requirement: -

- a.) Codelobster tool.
- b.) Visual studio code tool.
- c.) Xampp(Apache) server.

Operating System: -

- a.) Microsoft Windows 7 32 Bit or higher

Hardware Requirement: -

- a.) Core 2 Dual or Higher Processor
- b.) 1 GB or Higher RAM
- c.) Inkjet/Laser Printer to Print the report
- d.) Optical Drives (To Install Solution)

Introduction to PHP

Introduction: -

PHP is a general-purpose programming language originally designed for web development. It was originally created by Rasmus Lerdorf in 1994 . PHP originally stood for Personal Home Page, but it now stands for the recursive initialism PHP: Hypertext Preprocessor.

PHP code may be executed with a command line interface (CLI), embedded into HTML code, or used in combination with various web template systems, web content management systems, and web frameworks. PHP code is usually processed by a PHP interpreter implemented as a module in a web server or as a Common Gateway Interface (CGI) executable. The web server outputs the results of the interpreted and executed PHP code, which may be any type of data, such as generated HTML code or binary image data. PHP can be used for many programming tasks outside of the web context, such as standalone graphical applications and robotic drone control.

The standard PHP interpreter, powered by the ZendEngine, is free software released under the PHP License. PHP has been widely ported and can be deployed on most web servers on almost every operating system and platform, free of charge.

The PHP language evolved without a written formal specification or standard until 2014, with the original implementation acting as the de facto standard which other implementations aimed to follow. Since 2014, work has gone on to create a formal PHP specification.

PHP development began in 1994 when Rasmus Lerdorf wrote several Common Gateway Interface(CGI) programs in C which he used to maintain his personal homepage. He extended them to work with web forms and to communicate with databases ,and called this implementation "Personal Home Page/Forms Interpreter" or PHP/FI.

PHP/FI could be used to build simple, dynamic web applications. To accelerate bug reporting and improve the code, Lerdorf initially announced the

release of PHP/FI as "Personal Home Page Tools (PHP Tools) version 1.0" on the Usenet discussion group on June 8, 1995. This release already had the basic functionality that PHP has today. This included Perl-like variables, form handling, and the ability to embed HTML. The syntax resembled that of Perl, but was simpler, more limited and less consistent.

Early PHP was not intended to be a new programming language, and grew organically, with Lerdorf noting in retrospect: "I don't know how to stop it, there was never any intent to write a programming language I have absolutely no idea how to write a programming language, I just kept adding the next logical step on the way. A development team began to form and, after months of work and beta testing, officially released PHP/FI 2 in November 1997.

The fact that PHP was not originally designed, but instead was developed organically has led to inconsistent naming of functions and inconsistent ordering of their parameters. In some cases, the function names were chosen to match the lower-level libraries which PHP was "wrapping", while in some very early versions of PHP the length of the function names was used internally as a hash function, so names were chosen to improve the distribution of hash values.

PHP 3 and 4

Zeev Suraski and Andi Gutmanns rewrote the parser in 1997 and formed the base of PHP 3, changing the language's name to the recursive acronym PHP: Hypertext Preprocessor. Afterwards, public testing of PHP 3 began, and the official launch came in June 1998. Suraski and Gutmanns then started a new rewrite of PHP's core, producing the Zend Engine in 1999. They also founded Zend Technologies in Ramat Gan, Israel.

On May 22, 2000, PHP 4, powered by the Zend Engine 1.0, was released. As of August 2008 this branch reached version 4.4.9. PHP 4 is no longer under development nor will any security updates be released.

PHP 5

On July 14, 2004, PHP 5 was released, powered by the new Zend Engine II. PHP 5 included new features such as improved support for object-oriented programming, the PHP Data Objects (PDO) extension (which defines a

lightweight and consistent interface for accessing databases), and numerous performance enhancements. In 2008, PHP 5 became the only stable version under development. Late static binding had been missing from PHP and was added in version 5.3.

Many high-profile open-source projects ceased to support PHP 4 in new code as of February 5, 2008, because of the GoPHP5 initiative, provided by a consortium of PHP developers promoting the transition from PHP 4 to PHP 5.

Over time, PHP interpreters became available on most existing 32-bit and 64-bit operating systems, either by building them from the PHP source code, or by using pre-built binaries. For PHP versions 5.3 and 5.4, the only available Microsoft Windows binary distributions were 32-bit IA-32 builds, requiring Windows 32-bit compatibility mode while using Internet Information Services (IIS) on a 64-bit Windows platform. PHP version 5.5 made the 64-bit x86-64 builds available for Microsoft Windows. Official security support for PHP 5.6 ended on 31 December 2018,^[39] but Debian 8.0 Jessie will extend support until June 2020.

PHP 6 and Unicode

PHP received mixed reviews due to lacking native Unicode support at the core language level. In 2005, a project headed by Andrei Zmievski was initiated to bring native Unicode support throughout PHP, by embedding the International Components for Unicode (ICU) library, and representing text strings as UTF-16 internally. Since this would cause major changes both to the internals of the language and to user code, it was planned to release this as version 6.0 of the language, along with other major features then in development.

However, a shortage of developers who understood the necessary changes, and performance problems arising from conversion to and from UTF-16, which is rarely used in a web context, led to delays in the project. As a result, a PHP 5.3 release was created in 2009, with many non-Unicode features back-ported from PHP 6, notably namespaces. In March 2010, the project in its current form was officially abandoned, and a PHP 5.4 release was prepared containing most remaining non-Unicode features from PHP 6, such as traits and closure re-

binding. Initial hopes were that a new plan would be formed for Unicode integration, but as of 2014 none had been adopted.

PHP 7

During 2014 and 2015, a new major PHP version was developed, which was numbered PHP 7. The numbering of this version involved some debate. While the PHP 6 Unicode experiment had never been released, several articles and book titles referenced the PHP 6 name, which might have caused confusion if a new release were to reuse the name. After a vote, the name PHP 7 was chosen.

The foundation of PHP 7 is a PHP branch that was originally dubbed PHP next generation (phpng). It was authored by Dmitry Stogov, Xinchen Hui and Nikita Popov, and aimed to optimize PHP performance by refactoring the Zend Engine while retaining near-complete language compatibility. As of 14 July 2014, WordPress-based benchmarks, which served as the main benchmark suite for the phpng project, showed an almost 100% increase in performance. Changes from phpng are also expected to make it easier to improve performance in the future, as more compact data structures and other changes are seen as better suited for a

successful migration to a just-in-time (JIT) compiler. Because of the significant changes, the reworked Zend Engine is called Zend Engine 3, succeeding Zend Engine 2 used in PHP 5.

Because of major internal changes in phpng it must receive a new major version number of PHP, rather than a minor PHP 5 release, according to PHP's release process. Major versions of PHP are allowed to break backward-compatibility of code and therefore PHP 7 presented an opportunity for other improvements beyond phpng that require backward-compatibility breaks. In particular, it involved the following changes:

- Many fatal- or recoverable-level legacy PHP error mechanisms were replaced with modern object-oriented exceptions
- The syntax for variable dereferencing was reworked to be internally more consistent and complete, allowing the use of the operators `->`, `[]`, `0,{}`, and `::`, with arbitrary meaningful left-side expressions
- Support for legacy PHP 4-style constructor methods was deprecated

- The behavior of the foreach statement was changed to be more predictable.
- Constructors for the few classes built-in to PHP which returned null upon failure were changed to throw an exception instead, for consistency.
- Several unmaintained or deprecated server application programming interfaces (SAPIs) and extensions were removed from the PHP core, most notably the legacy mysql extension.
- The behavior of the list() operator was changed to remove support for strings.
- Support was removed for legacy ASP-style delimiters <% and %> and <script language="php"> ... </script>.
- An oversight allowing a switch statement to have multiple default clauses was fixed.
- Support for hexadecimal number support in some implicit conversions from strings to number types was removed.
- The left-shift and right-shift operators were changed to behave more consistently across platforms.
- Conversions between integers and floating point numbers were tightened and implemented more consistently across platforms.

PHP 7 also included new language features. Most notably, it introduces return type declarations for functions, which complement the existing parameter type declarations, and support for the scalar types (integer, float, string, and boolean) in parameter and return type declarations.

HTML Introduction

Hypertext Markup Language (HTML) is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript.

Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes and other items. HTML elements are delineated by *tags*, written using angle brackets. Tags such as `` and `<input />` directly introduce content into the page. Other tags such as `<p>` surround and provide information about document text and may include other tags as sub-elements. Browsers do not display the HTML tags, but use them to interpret the content of the page. HTML can embed programs written in a scripting language such as JavaScript, which affects the behavior and content of web pages. Inclusion of CSS defines the look and layout of content.

CSS Introduction

Cascading Style Sheets (CSS) is a style sheet language used for describing the presentation of a document written in a markup language like HTML. CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript. CSS is designed to enable the separation of presentation and content, including layout, colors, and fonts. This separation can improve content accessibility, provide more flexibility and control in the specification of presentation characteristics, enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file, and reduce complexity and repetition in the structural content.

Introduction to Xampp Server & MySQL

Xampp Server

XAMPP is a free and open-source cross-platform web server solution stack package developed by Apache Friends, consisting mainly of the **Apache HTTP Server**, **MariaDB database**, and interpreters for scripts written in the **PHP** and **Perl** programming languages. Since most actual web server deployments use the same components as XAMPP, it makes transitioning from a local test server to a live server possible.

XAMPP stands for Cross-Platform (X), Apache (A), MariaDB (M), PHP (P) and Perl (P). It is a simple, lightweight Apache distribution that makes it extremely easy for developers to create a local web server for testing purposes. Everything needed to set up a web server – server application (Apache), database (MariaDB), and scripting language (PHP) – is included in an extractable file.

MySQL

MySQL is a popular relational database management system. It can provide high performance and stability. It is used by websites developers to build different types web applications [16], it provides API for many languages such as: C, C++, Java and PHP etc. The top layer of MySQL architecture is not unique for MySQL, all network-based C/S for web applications should include the connection handling, authentication, security management. The middle layer is the core of MySQL, including query parsing, analysis, optimization, and caching. It also provides functions across storage engines, including stored procedures, triggers and views and so on. The bottom layer is a storage engine, which is responsible for access to data. Web server through the storage engine API[17] can interact with a variety of storage

</header>

The banner features the EcoTrek logo at the top left. At the top right, there are links for "My Account" and a green "Logout" button. The main headline reads "Take the First Step towards a Greener Future". Below it, a sub-headline says "Transform your business into a force for sustainability with data-driven carbon tracking and actionable insights." Two buttons at the bottom are "Check Now" and "Learn More".

 "The greatest threat to our planet is the belief that someone else will save it." - Robert Swan

This section is titled "WHAT WE DO" and features three main services:

- Carbon Footprint Calculator**: A tool to quickly calculate carbon emissions based on daily activities and lifestyle choices. It shows how small changes can make a big difference. Buttons for "Explore Now" and "View Details" are provided.
- Token Purchase**: Allows users to purchase carbon offset tokens to neutralize their emissions and support the planet. It highlights verified environmental projects and the ability to make a meaningful contribution to sustainability with every purchase. Buttons for "Explore Now" and "View Details" are provided.
- Offset Projects**: Focuses on reforestation, renewable energy, and carbon reduction. It encourages users to explore projects and make a difference. Buttons for "Explore Now" and "View Details" are provided.

Facts And Figures

 **Global CO₂ Emissions at an All-Time High**
In 2022, global CO₂ emissions reached 36.5 billion metric tons, the highest in recorded history without significant intervention. Increases are expected to keep rising, reaching the climate crisis.

 **Rising Temperatures & Melting Ice**
The Earth's average temperature has risen by 1.1°C since 1880, and Arctic sea ice is melting at 13% per decade. Scientists warn that if warming exceeds 1.5°C, irreversible damage to ecosystems will occur.

 **Forests Disappearing Rapidly**
Each year, 10 million acres of forest are lost—equivalent to 27 soccer fields per minute, increasing 22% faster. Reforestation efforts and climate-conservation policies are essential to reversing this trend.

 **Corporate Action Taking Action**
Over 1,800 major corporations, including Google and Microsoft, have pledged to reach net-zero emissions by 2050. Corporate sustainability initiatives are also influencing wider business to action processes.

 **Carbon Offsetting is Growing**
The global carbon offset market is projected to hit \$10 billion by 2025, investing in emission reduction projects. Experts emphasize the importance of combining carbon offsetting with other climate solutions.

 **Sustainable Energy on the Rise**
In 2023, 29% of global electricity was generated from renewables, including solar, wind, and hydropower. The cost of solar power has dropped by 80% since 2010, making it more accessible for households and businesses.

Home Offset Now Information About Us Contact Us My Account

Offsetting Your Carbon Footprint in Three Simple Steps

Everyone contributes to the world's carbon emission problems. Be part of the solution to a cleaner and greener planet. By taking the easy steps of calculating your carbon footprint, and purchasing credits, you can support game-changing projects and mitigate the footprint you leave on Earth. Each carbon credit purchased removes one tonne of carbon dioxide equivalent gas emissions from the atmosphere.

WHAT WE DO

Carbon Footprint Calculator

Quickly calculate your carbon emissions based on daily activities and lifestyle choices. Understand how small changes can make a big difference. Take control of your environmental impact and start reducing today.

Token Purchase

Purchase carbon offset tokens to neutralize your emissions and support the planet. Your tokens help fund verified environmental projects worldwide. Make a meaningful contribution to sustainability with every purchase.

Offset Projects

Explore projects focused on reforestation, renewable energy, and carbon reduction. Every contribution you make helps reduce the global carbon footprint. Join us in supporting impactful initiatives for a sustainable future.

Please complete each step of the business emissions calculator that is relevant to your business, using actual (or estimated) annual operational data.

Press the **Next** button to skip any calculations.

A screenshot of the "Carbon Emissions Calculator" for electricity usage. The page has a light green header with the title "Carbon Emissions Calculator" and tabs for Electricity, Heat, Travel, Shipping, Food, Waste, Water, and Total. Below this, a section titled "Annual Electricity Usage" shows a KWH input field containing "0". To the right, an "EMISSIONS TOTAL" box shows "Total: 0.00 INR". Below the input field, it says "Tonnes CO2: 0.000" and "Total Cost: 0.00 INR". At the bottom are "Previous" and "Next" buttons.

The screenshot displays the homepage of the EcoTrek website. At the top, there is a banner featuring two workers in hard hats and safety vests standing next to solar panels. The banner has the text "Explore Carbon Offset Programs" and "Purchase credits to support carbon offset projects and choose your program." Below the banner is a green "Purchase Now" button. The main navigation menu includes links for Home, Offset Now, Information, About Us, Contact Us, and My Account. Below the menu, there are five categories: Reforestation, Renewable Energy, Energy Efficiency, Blue Carbon, and Carbon Capture. Each category has a corresponding image and a "Learn More" and "Select" button. The "Selected" button is highlighted for the Reforestation category. The footer is dark green with the EcoTrek logo, social media links (Instagram, Facebook, YouTube, X, LinkedIn), and copyright information: "© 2025 EcoTrek. All rights reserved." and "Designed By Raahguru".

Forest-Restoration-Initiative.php

Forest Restoration Initiative

Select

Climate change refers to long-term alterations in temperature, precipitation, and other atmospheric conditions on Earth. While some climate variations occur naturally, human activities, particularly the burning of fossil fuels, deforestation, and industrial emissions, have accelerated global warming.

The primary cause of climate change is the release of greenhouse gases, such as carbon dioxide and methane, which trap heat in the atmosphere. This leads to rising global temperatures, melting ice caps, rising sea levels, and extreme weather events like hurricanes, droughts, and wildfires.

The effects of climate change are widespread, impacting ecosystems, agriculture, wildlife, and human health. It threatens food security, increases the frequency of natural disasters, and disrupts weather patterns worldwide.

To combat climate change, individuals and governments must take action by reducing carbon emissions, transitioning to renewable energy sources, conserving forests, and promoting sustainable practices. Every effort, big or small, can help mitigate the impact and protect the planet for future generations.

paymentForm.php

The screenshot shows the EcoTrek website with a green grass background. At the top, there's a dark blue header bar with the title "paymentForm.php". Below the header, the main navigation menu includes "Home", "Offset Now", "Information", "About Us", "Contact Us", and a "My Account" button. The central content area features a white "Payment Details" form. The form fields are as follows:

- Company Name: (input field)
- Email: (input field)
- Selected Project Name: (input field) - value: Mangrove Regeneration Program
- Selected Project ID: (input field) - value: ECO-2025002
- Carbon Offset (Tonnes): (input field) - value: 1
- Credit Amount: (input field) - value: 1
- Dollar Amount (\$): (input field) - value: 1000
- Payment Method: (dropdown menu) - value: Select a Payment Method

A green "Proceed to Payment" button is at the bottom of the form. At the very bottom of the page, there's a footer section with the EcoTrek logo, social media links (Instagram, Facebook, YouTube, X, LinkedIn), and copyright information: "© 2025 EcoTrek. All rights reserved" and "Designed By Rukhsana".

What is Climate Change?

Climate change refers to long-term alterations in temperature, precipitation, and other atmospheric conditions on Earth. While some climate variations occur naturally, human activities, particularly the burning of fossil fuels, deforestation, and industrial emissions, have accelerated global warming.

The primary cause of climate change is the release of greenhouse gases, such as carbon dioxide and methane, which trap heat in the atmosphere. This leads to rising global temperatures, melting ice caps, rising sea levels, and extreme weather events like hurricanes, droughts, and wildfires.

The effects of climate change are widespread, impacting ecosystems, agriculture, wildlife, and human health. It threatens food security, increases the frequency of natural disasters, and disrupts weather patterns worldwide.

To combat climate change, individuals and governments must take action by reducing carbon emissions, transitioning to renewable energy sources, conserving forests, and promoting sustainable practices. Every effort, big or small, can help mitigate the impact and protect the planet for future generations.

This page provides an overview of EcoTrek's mission and impact. It includes a section titled "About Ecotrek" with a short history and mission statement, followed by a large photo of a group of people at an event.

This section highlights reasons why businesses reduce carbon emissions. It lists six benefits: Cost Savings, Consumer Trust, Future-Proofing, Attracting Investors, Employee Motivation, and Regulatory Compliance.

What Drives Us

Mission

"To empower businesses with facts and insights to plan, measure, communicate, and reduce their carbon footprint, making sustainability practical and inspiring."

Vision

"A future where businesses lead the way in creating a sustainable world, showing responsibility, innovation, and growth."

Our Commitment

"To continuously improve, leverage technology and advocate for policies that prioritize environmental well-being."

Our Impact

"Helping companies reduce their carbon footprint to create a cleaner planet and a sustainable future."

MEET OUR TEAM

Have questions or want to collaborate?

Book a meeting with us today to help continue our sustainability journey.

<h1>About Ecotrek</h1>

<p>Our journey began with a simple yet powerful idea: to make reducing carbon emissions accessible to everyone. As we witnessed the growing impacts of climate change—rising temperatures, extreme weather, and environmental degradation—we knew we had to act.</p>

<p>Founded by a team of passionate environmentalists and innovators, EcoTrek started as a mission to empower individuals and businesses to measure, reduce, and offset their carbon footprints.</p>

<p>We provide comprehensive, vertically integrated solutions to help clients maximize their environmental assets, minimize regulatory costs, and enhance their sustainability impact.</p>

The screenshot shows the EcoTrek website's contact page. At the top, there is a navigation bar with links to Home, Offset Now, Information, About Us, Contact Us, and a My Account button. Below the navigation is a large banner featuring a woman working at a desk. On the left side of the banner, there is a "CONNECT WITH US" section with links for Email Us Directly (ecotrek01@gmail.com) and Give Us A Call (+91 12345 67890). There is also a "FOLLOW US ON SOCIAL MEDIA" section with icons for Instagram, Facebook, YouTube, Twitter, and LinkedIn.
